## Common borders. Common solutions.

### VISITING/MEETING WITH FISHERMEN

IASON team (PP5) was visited Kızılırmak Deltaic protected area at 6-9 June 2021. During this time, team visited fishermen cooperatives, public who live in the Deltaic area and also governmental officers related with this area.

During the visit, we checked IAS sampling time, and checked sampling stations where the areas cover Kızılırmak protected area and if the stations targeted species.

We met fishermen and asked them the frequency of the IAS in each net and also asked them which species are more frequent than the other and also the rate of the natural species and IAS species. The fishermen shared their knowledge about IAS to the IASON team.
